Essentials vs Accessories

Indoor comfort in your home is about more than just adjusting the temperature on the thermostat. Many homeowners overlook the need for necessary components and systems that can improve the indoor air you breathe. Indoor air quality products and systems are quite frequently treated as accessories. We define them as indoor air essentials.

Duct-mount HEPA air cleaners

The **Clean Comfort**® CC-HEPA and CC-HEPAUV HEPA bypass air cleaners offer a new standard of indoor air HEPA filtration with advanced design, patented features and versatile installation. Plus, the **Clean Comfort** HEPA products installed in a bypass configuration allows for no added static pressure.

Clean Comfort HEPA filtration products use a HEPA media material to remove 99.97% of all particles as small as 0.3 microns (1/84,000 of an inch) from a home's air*.

*Independent testing performed by LMS Technologies, Inc.

CC-HEPA*

- Installing the CC-HEPA in a bypass configuration allows for no added static pressure to the HVAC system.
- Versatile installation: return duct mounting or return remote collar mounting with pre-punched knockouts.
- Plug-in power cord (120 VAC); no field wiring required.

CC-HEPAUV*

- Dual UVC Lamps.
- Installing the CC-HEPAUV in a bypass configuration allows for no added static pressure to the HVAC system.
- Versatile installation: return duct mounting or return remote collar mounting with pre-punched knockouts.
- Plug-in power cord (120 VAC); no field wiring required.

Optimal protection

Some people rely on portable "HEPA-like" filtration units to clean the air in their homes. But these units only clean the air in the proximity of the room where they're installed. The HEPAs are a whole-home system that's professionally installed and maintained as part of your home's central heating and cooling system.

High-efficiency filtration

The Clean Comfort® brand AM Series of media air cleaners are a more efficient and convenient way to clean the air in your home compared to standard furnace filters, which may need to be replaced monthly. They help to remove household dust, lint and other particulates passing through the return air ducts of your central heating and cooling system.

Media air cleaners

AM13-CleanFit*

The Clean Comfort CleanFit series of MERV 13 media air cleaners are intuitively designed with outer dimensions that match original equipment furnace and air handler cabinets.

AMB11-Builder*

The Clean Comfort AMB11 series of MERV 11 media air cleaners are for vertical or horizontal residential applications and are offered in nominal sizes for adapting to various installations.

AM11-5RA*

The AM11-5RA adjustable Inlet Duct opening replaces the need for field forming transition, which significantly reduces installation time.

Accessory

AMP-BSRB*

The Clean Comfort Furnace Riser raises the furnace off of the ground and adds bottom return.

Replacement filters and upgrades

MERV 8, 11, and 13 Filters

- Available in 1", 2", and 4" depths in a variety of standard and custom sizes

1" Hybrid Air Cleaner

- 95% Efficient at one micron
- 18 Standard sizes plus custom
- Retrofits any 1" rack, grill, or slot

4.5" High Capacity Replacement Media Filter

- AMP-11 Standard MERV 11 direct replacement filter
- AMP-13C Upgraded MERV 13 co-pleated with carbon pre-filter

PURE. CLEAN. AIR.

Whole-home indoor air quality solutions

Clean Comfort® Indoor Air Essentials can improve the quality and comfort of your home's indoor air. Components can be installed on virtually any brand of HVAC equipment in any home or installation. (For illustration purposes, we have shown a basement installation.)

Our complete family of Clean Comfort products helps to improve indoor air quality:

Filtration

HEPA bypass filtration cleans air to a high-quality standard removing 99.97% of all particles as small as 0.3 microns. Media air cleaners are a more efficient and convenient way to clean the air than standard filters. Both options may help to remove dust, lint, and other particulates.

Humidification

Whole-home humidifiers add moisture to the conditioned air flowing through the home. Premium steam humidifiers help maintain comfortable humidity levels utilizing electrode and canister technology. Evaporative humidifiers use the warm furnace air to circulate evaporated moisture.

Dehumidification

Whole-home dehumidifiers remove moisture from your home's air, helping to keep the indoor environment comfortable. The dehumidifier can work in conjunction with your central AC system or independently as needed, automatically maintaining suitable year-round humidity levels.

Purification

Ultraviolet (UV) light is an effective method to inhibit the growth of microbes such as mold, bacteria, and viruses. Air purifiers harness the power of UV, increasing disinfection power in the airstream. UV coil purifiers bask the coil with UV light and help to keep the evaporator coil clean.

Ventilation

Heat Recovery Ventilators (HRV) and Energy Recovery Ventilators (ERV) offer a simple, energy-efficient solution for ventilating well-insulated homes. HRV and ERV products keep you comfortable and may save energy by using the stale indoor air exhaust to condition fresh incoming air.

Zoning

A zoned residential HVAC system redirects air to specific areas of the home, allowing for the creation of customized temperature zones for increased comfort. Advanced, integrated controls monitor the system static pressure to reduce air noise and assures adequate system airflow.

Additional information

Before purchasing this appliance, read important information about its estimated annual energy consumption, yearly operating cost or energy efficiency rating that is available from your retailer.
